

# Omnisept®

## Severe Organic Contamination Remover

**Omnisept** is a highly effective hydrogen peroxide-based remover of a wide variety of stain- and odor-causing severe organic contaminants. Use it for mold remediation, crime scene clean-up, human and animal waste remediation, carpet & subfloor cleaning, auto interior detailing, locker rooms, etc. It is also effective for roof cleaning, pressure washing, marine & RV applications and much more. It's science, but it works like magic!®

While other leading remediation products often rely on significantly higher concentrations of hydrogen peroxide, **Omnisept** utilizes a reduced concentration of hydrogen peroxide that negates many of the PPE (personal protection equipment) and transportation concerns that go along with higher concentrations. **Omnisept** ships by UPS/FedEx or common carrier without penalty.

But the real magic of **Omnisept** — *and what makes it outperform other products that carry strict precautions* — is the proprietary Booster, which accelerates the oxidizing action of the Concentrate, thus dramatically increasing its efficacy and allowing it to go to work immediately. **Omnisept** performs as if it were much stronger than it is, yet contains no bleach, has no odor and is well tolerated.

When **Omnisept** is finished doing its job, it naturally breaks down into water and oxygen. With proper technique to remove the loosened contaminants, there is nothing left but a clean surface.

**Shown In The Photos:** (1) Moldy joists in a basement contaminated with multiple species of mold, as verified by testing. (2) An adjacent joist during remediation with **Omnisept**. Notice how **Omnisept** foams the contamination loose, making it easy to wipe or HEPA vacuum away. (3) Adjacent framing members after remediation. They're 27 years old, but now look like new. (4) A spa filter that had grown mold in an adjacent room. (5) The same filter after treatment with **Omnisept**, looking like new. (6) A pile of dead mice, found at the bottom of a stud cavity in the same room as the above-pictured joists. (7) The same stud cavity after remediation with **Omnisept**.

As you can see for yourself, **Omnisept** is phenomenally effective at killing mold and removing all manner of accumulated organic stains. What you can't see here, though, is how effective **Omnisept** is at remediating horrible odors that go along with these sorts of environmental contaminants.

**Directions:** Use **Omnisept** full strength; do not add water. Add the complete 8oz. bottle of Booster to the gallon jug (which contains 120oz. of 7.5% commercial-grade hydrogen peroxide) before use. If working a smaller area than would require a full gallon, you can mix small amounts as needed; use 30oz. peroxide Concentrate and 2oz. Booster to fill a quart-size sprayer bottle. Gently stir in the Booster to evenly distribute it within the peroxide Concentrate. Apply with a trigger-sprayer bottle or a pump-up sprayer.

Once the Booster is added to the Concentrate, a rapid reaction occurs which emits large quantities of oxygen. Because of this, it is imperative that you **NOT** re-cap the gallon jug or leave your sprayer equipment closed up. Doing so will result in an explosion due to pressure build-up. Once activated, you **MUST** be actively dispensing **Omnisept** from its container, so as to release the oxygen emitted.

**Omnisept** will achieve maximum effectiveness on surfaces below 18% moisture content. Spray **Omnisept** on contaminated surfaces and keep them moist for as long as possible (20 minutes minimum). While not generally necessary, you can gently agitate the surface with a bristle brush if desired.

HEPA wet-vac off the foam emitted, as it contains the organic contamination which **Omnisept** has forced out of the contaminated substrate. If no HEPA wet-vac is available, use a conventional wet-vac or wipe away the foam and contaminants with fresh paper towels, changing towels often. Contain used towels per common professional guidelines and quickly remove them from the structure being remediated.

Because there is residual efficacy while **Omnisept** dries, we do not advise accelerated drying of treated substrates. Allow remediated surfaces to dry naturally. But, if the treatment area lacks light and ventilation, utilize an air mover to improve airflow and preclude subsequent regrowth once the product has substantially dried naturally.

## Omnisept Vs. The Competition

Shown to the right are photos of **Omnisept's** chemistry (on the right) versus four popular products used by professional mold remediators.

In side-by-side tests, **Omnisept's** chemistry beats the competition hands down, even though the competing products are more hazardous and carry PPE (personal protection equipment) warnings.

As the photos clearly show, **Omnisept's** accelerated chemical action powers through the wood samples' tough mold, mildew and aging far better than the leading competing products.

## Works Like It's Much Stronger Than It Is

Because of **Omnisept's** brilliant chemistry, it works in a supercharged way. So, even though it's approved for common shipment via UPS, FedEx, etc., which other leading professional brands aren't (due to their high percentage of hydrogen peroxide), its performance leaves the competition in the dust.

## Excellent For A Variety Of Severe Contamination Jobs

In addition to its usefulness with mold remediation, **Omnisept** is also appropriate for removing organic soiling from vehicles, building exteriors, roofs and more.

## Works Better, Yet Costs Less!

The professional products shown can cost far more than **Omnisept**. Why pay more for reduced performance?

## Professional Power Now Available To Consumers

The professional-grade products shown here are staples of the remediation industry and are typically only available through the professionals-only distribution channel. But now the power of **Omnisept** is available to homeowners and others.

## Even Omnisept Doesn't Make You A Mold Professional

Even though you have access to such a pro-level product as **Omnisept**, that doesn't mean that you don't necessarily need to engage mold remediation experts for your project.

Mold is dangerous to your health and is nothing to mess with. Professionals have intricate training that consumers do not, and there are many aspects of mold remediation for which prudence dictates the inclusion of licensed, certified professionals. For instance, an industrial hygienist should be consulted so as to better quantify the seriousness of your issue, and to help determine its cause. Additionally, licensed professionals are well-versed in containment procedures, negative airflow, HEPA air scrubbing and more that are important safety concerns during any mold remediation job.

Because of these factors, we urge you to consult professionals before beginning a mold remediation job. If you choose not to engage professionals for your project, we urge you to study up on proper containment techniques, HEPA air scrubbing, negative airflow and other pertinent factors. We, the distributor of this awesome product, assume no liability for your use of **Omnisept** or the other factors that pertain to your particular situation.

## Availability

**Omnisept** is available in single 1-gallon jugs and cases of (4) 1-gallon jugs. Both include (1) 8-oz. Booster bottle per gallon jug.
