

Great For Odors, Stains, Mold, Dead Critters & More!

Omnisept®

Severe Organic Contamination Remover

• Extremely Easy To Use

Spray on, allow to dwell, then wipe or wet-HEPA-vac off.

• Really Versatile — Not Just For Mold Remediation

Remediates a variety of organic stains and odors on water-safe hard and soft surfaces.

• No Harsh Chemical Smell Like Other Brands

Contains no bleach. Is virtually odorless, so it is well tolerated by operators and clients. "It just does its job, then it's gone!"

• Reduced PPE Requirements

Because Omnisept utilizes a reduced concentration of hydrogen peroxide, it carries far less-stringent precautions than other leading products.

• Nothing Beats Omnisept For Features Or Value!

***** Add Booster To Concentrate Before Use *****

NOTE: We are a charitable company and support animal-welfare causes locally and nationally. Up to the limit allowed by federal tax laws, proceeds from the sale of **Omnisept** are used in the fight against pet overpopulation and to help improve needy animals' lives, so you're getting a superior product and supporting a very worthy cause at the same time. Thank you for your help.

If **Omnisept** is being used to remediate animal-waste issues, we remind you that, as with any behavior change in your pet, inappropriate elimination should always be evaluated by your veterinarian to rule out a medical cause.

Omnisept is a highly effective, fast-acting hydrogen peroxide-based remover of the stains and odors of organic contamination such as blood, urine, mold, etc.

Omnisept is generally safe for most hard and soft surfaces and leaves behind no toxic residual. Scrubbing is often unnecessary and **Omnisept** continues to clean long after use. Generally safe to use on wood, plastic, concrete, drywall, carpet & upholstery, painted surfaces, stucco and fiberglass. Always test an inconspicuous area before use.

Omnisept reacts with organic matter and encapsulates it into profuse foam for easy removal via HEPA vacuuming or wiping.

Compared to competing products, **Omnisept** utilizes a reduced concentration of hydrogen peroxide. This negates many of the PPE (personal protection) and transportation concerns that go along with higher concentrations.

The magic of **Omnisept** is in the Booster, which accelerates the oxidizing action of the hydrogen peroxide, thus greatly increasing its efficacy and allowing it to go to work immediately. **Omnisept** works as if it were much stronger than it is.

Directions: To apply **Omnisept**, wear safety goggles and rubber gloves. If used in a confined area such as a crawlspace, wear appropriate respiratory protection.

Add the complete 8oz. bottle of Booster to the gallon jug (which contains 120oz. of hydrogen peroxide) before use, then mix for a few seconds. Once activated, a rapid reaction occurs which emits large quantities of oxygen. Because of this, it is imperative that you NOT re-cap the gallon jug or leave your sprayer equipment closed up. Doing so will result in an explosion due to pressure build-up. Once activated, you MUST be actively dispensing **Omnisept** from its container, so as to release the oxygen emitted by the activated mixture.

REPEAT: DO NOT REPLACE THE CAP ON THE GALLON CONTAINER ONCE THE BOOSTER IS ADDED OR LEAVE YOUR SPRAYER EQUIPMENT CLOSED UP. AN EXPLOSION RISK WILL RESULT DUE TO THE RAPID RELEASE OF OXYGEN.

Use at full blended strength; do not add water. **Omnisept** can be brushed on or applied with a pump or motorized sprayer, or a trigger sprayer bottle.

Spray **Omnisept** on contaminated surfaces and keep surfaces moist for as long as possible (20 minutes minimum for mold, 15 minutes for odors in carpet). Gently agitate hard surfaces (framing members, concrete, etc.) with a bristle brush. Carpet or upholstery can be gently agitated with a bristle brush, carpet machine or carpet rake if desired to help **Omnisept** come in contact with all the fibers.

It is recommended that you wet HEPA vacuum off the foam emitted in mold remediation, as it contains the organic contamination which **Omnisept** has forced out of the contaminated substrate. If no wet HEPA vacuum is available, wipe away the foam with fresh paper towels, changing towels often. Contain towels per common professional guidelines in a sealed trashbag and immediately remove from the structure being remediated or deodorized. For carpet and upholstery, extract with a carpet extractor or allow to air dry.

Allow remediated surfaces to dry naturally. However, if the area lacks light and ventilation, utilize an air mover or fan to improve airflow and preclude subsequent growth or re-growth. Because there is residual efficacy while **Omnisept** dries, we do not advise too-rapid drying of treated substrates.

If working a smaller area than would require a full gallon, mix 30oz. **Omnisept** Concentrate and 2oz. of Booster in a quart-sized sprayer bottle.

Once activated, use within 8 hours. Efficacy diminishes over time, so use the activated mixture as soon as possible after blending.

Omnisept will achieve maximum effectiveness on surfaces that are below 18% in moisture content.

Contents: 120oz. of 7.5% hydrogen peroxide
